IDIER

INSPIRED FOR LIVING™

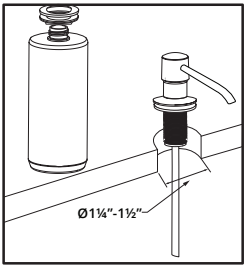

INSTALLATION:

•Unscrew locknut and one washer from the threaded pipe and place aside. Take nozzle, flange, rubber washer and insert through precut opening on top of counter or sink. Make sure that the rubber washer is placed over the opening to help form a seal.

•From under the counter or sink, place 2nd rubber washer and locknut on to threaded fitting. Screw locknut until tight against underside of counter or sink.

•Take bottle and screw onto threaded fitting.

FILL INSTRUCTIONS:

•Remove nozzle along with tube and pour 12 oz or less of soap into bottle opening. Place tube into bottle and push down on nozzle slightly to reinstall.

•Place finger over opening on end of nozzle and depress the nozzle head several times until soap is flowing freely through the tube.

Note:

•It is possible that certain types of soap may have a reaction with metal parts of the soap dispenser; this may discolor the soap.
